Parata

Parata Puts You Out in Front

Parata RDS (Robotic Dispensing System)

delivers high-speed prescription productivity in a sleek, compact machine that automates more than half of a pharmacy's prescription volume.

Compact Power

Parata RDS conserves valuable pharmacy floor space; at 12-square feet it was designed to fit existing pharmacy layouts, replacing just a single shelving unit.

Breakaway Performance

Parata RDS fills a prescription in about 20 seconds, a cycle time that includes selecting a vial, labeling, filling, capping and sorting by patient last name. Parata's patented counting technology counts 25 tablets a second to fill approximately 150 prescriptions an hour. Its 252 dispensing cells hold any size tablet and can be replenished without interrupting operation. On-site calibration makes it

easy to change the medication load in response to pharmacy demand. Parata RDS is quality manufactured in the U.S. under strict ISO standards.

Key Differentiators

Consider these features when you compare robotic dispensing solutions. Only Parata RDS:

- Offers the smallest footprint (12 sq. ft.) and the highest number of dispensing cells (252).
- Completes a prescription every 20-25 seconds. Cycle time includes labeling, counting, capping and sorting by patient last name in easy-access lettered bins.
- Makes capping integral to the process.
- Is simple to install, maintain and operate. The Parata replaces just a standard shelving unit, plugs into a dedicated outlet, can be replenished without interrupting operation and integrates easily with your pharmacy's existing workflow.

Parata RDS increases pharmacies' productivity and puts pharmacists out in front so they can spend more time doing what they do best: care for patients.
